

Slide 1: GHG Scopes of Emissions

Overview of Greenhouse Gas Protocol scope and emissions across the value chain.
 Source: GHG Protocol

Slide 2: Example GHG Concentration Ranges

1. FEIS 2015 Energy Policy scenario excluding the coal mining offset equal to 1.99 million metric tons CO₂e
2. Annual global GHG emissions reached 49.5 billion metric tons of CO₂e in the year 2010 (Source: IPCC).
3. The global CO₂ concentration in March 2016 was 404 parts per million (ppm), which equates to 3,153 billion metric tons (Source: NOAA)
