

## SOUTH FORK McCORKLE CREEK DETENTION STRUCTURE PHASE 1 MODIFICATIONS

Project Description: Nutter Corporation, a company with considerable experience in this type of construction, was the successful bidder for Phase 2. This project will require the transfer of roughly 96,000 cubic yards of material, the equivalent of approximately 6,000 trucks on Sparks Drive over a 6-month period. We understand the impact this additional traffic will have on residents and businesses in the area, particularly those along Sparks Drive or adjacent to the McCorkle Creek Detention Structure. In cooperation with the contractor, we will strive to minimize the impact. We believe that the short-term nuisance this project creates will result in additional flood protection for the entire neighborhood.

Schedule: Construction is scheduled to begin in late-October with completion expected in March.
